

Incentives and Rebates for Energy-Efficient Windows offered through utility and state programs

Presented by the Efficient Windows Collaborative, January 2012

- Do you intend to equip your home with high-performance, energy-efficient windows?
- Do you plan to improve your home in a way that lowers energy costs and provides for a comfortable interior?
- Are you looking for utility programs within your state that can help you finance such an investment in efficient windows?

The following pages give an overview of utility and state programs to help finance improvements in window energy efficiency.

Programs are listed by state and by the specific utility companies that administer the programs. For detailed information about each program, please refer to the web links in the list.

Some programs aim to improve home energy performance in general, others explicitly focus on windows. Direct mention of windows (as well as shades, storm windows, and window film) **is marked in red**. For details about the eligibility criteria of specific programs, please contact the respective utility sponsors.

PLEASE NOTE:

- This list does not give complete information about ALL window-related utility programs in the United States. Please contact your utility for more information about available programs;
- In addition to the programs listed in this list, the U.S. Department of Energy's Weatherization Assistance Program provides home energy efficiency improvements to millions of eligible families. Find information on how to apply for weatherization and who to contact in your state at <http://apps1.eere.energy.gov/weatherization/apply.cfm>.
- A particularly useful database for state-based energy efficiency incentives can be access through www.dsireusa.org.
